VMS. Опциональная часть 18
Дополнительная информация 25

Задание

Задача:

Для уязвимого проекта django.nv:

DAST:

1. Запустить проект локально

2. Протестировать работу OWASP Zap - скачать докер-образ инструмента, запустить сканирование, получить отчет в формате json, xml

3. Встроить OWASP Zap с генерацией артефакта формате xml (stage prod). job не должна останавливать работу pipeline, отчеты, полученные в ходе job, должны быть сохранены в виде артефакта работы.

ДЗ VMS (опционально):

1. Развернуть DefectDojo (https://defectdojo.com, https://github.com/DefectDojo/django-DefectDojo), изучить документацию и его api

2. На основе показанного в вебинаре скрипта написать свой скрипт по загрузку отчетов в Dojo

3. Интегрировать автоматическую выгрузку отчетов из CI/CD в DefectDojo для SCA, SAST и DAST в соответствующие job, написанные ранее в ДЗ

Формат выполнения: отчет в формате PDF, который содержит скриншоты команд и результатов работы при запуске в виде докер-образа и в CI/CD, а также финальный код итогового pipeline. Если сделали VMS-часть, то скриншоты с выгрузкой распаршенных отчетов для каждого из инструментов.

Локальное сканирование

Проблема локального запуска

Ввиду текущих проблем версии Python требуемого для запуска проекта и установленной версии локально возникают конфликты принято решение запустить проект Django.Nv в контейнером окружении.

- Django 1.8.3 — версия указана в requirements.txt и до выхода Python 3.4 или 3.5.
- Python 3.13 (в моей Anaconda) — это свежая версия от 2024 года.
